

Binge eating: patterns, shame and treatment engagement

Original support worksheet | Adults | Reviewed 2026-10-10

Use fictional or appropriately de-identified notes. Write, draw, dictate or point. Not a validated measure, diagnostic test or crisis service.

Earlier context: Food access, rules, stress

Loss-of-control experience: Person's description

Immediate effect: Relief, distress or both

Aftermath: Shame, compensation, avoidance

Treatment support: Assessment, privacy, feasible plan

Earlier context and eating rules; no calorie counts needed

My experience of control and immediate effect

Aftermath, compensation concerns and functional impact

Qualified-care question and support I choose

Next step: who will do what, by when, and how will we review helpfulness or harm?

Compensatory behaviors, fainting, dehydration, cardiac symptoms, severe deterioration or suicidality require appropriate medical/clinical assessment. Do not delay care while completing a pattern log.
