

Psychosis: voices, distress and collaborative coping

Original support worksheet | Adults | Reviewed 2026-10-10

Use fictional or appropriately de-identified notes. Write, draw, dictate or point. Not a validated measure, diagnostic test or crisis service.

Experience: What is noticed; whose account?

Meaning: What it seems to imply

Emotion / body: Fear, shame, overload

Response: Avoidance, checking, coping

Function: Meals, connection, daily roles

A recent voice/experience and the situation

Meaning, distress and sense of control

A safe coping option I choose to test

What changed in distress and participation afterward

Next step: who will do what, by when, and how will we review helpfulness or harm?

Command content needs assessment of intention, perceived control, means, distress and protections; content alone is not a risk classification. Imminent harm, inability to meet basic needs, acute confusion or major deterioration requires urgent local response.
