

Task Launch Map

Choose one task that is currently stuck. Build the smallest workable launch.

Task I am trying to do:

Where is the friction?

- | | |
|--|--|
| ☐ Starting | ☐ Remembering |
| ☐ Knowing the next step | ☐ Estimating time |
| ☐ Too many steps | ☐ Too many distractions |
| ☐ Switching from something else | ☐ Perfectionism or fear |
| ☐ Boredom | ☐ Low energy |
| ☐ Missing materials | ☐ Other |

The first physical action is:

I will see the reminder here:

I will start at this time or after this anchor:

What can be prepared in advance?

Keep the Plan Outside Your Head

If I stop midway, the exact restart point will be:

Supports I want to test

- | | |
|---|--|
| ☐ Written steps | ☐ Timer |
| ☐ Calendar block | ☐ Body double |
| ☐ Quiet space | ☐ Headphones |
| ☐ Movement break | ☐ Visible materials |
| ☐ Template/example | ☐ Accountability check-in |
| ☐ Automated reminder | ☐ Other |

The smallest version that would still count:

What will tell me this system is helping?

If it fails, what will I change instead of blaming myself?

Use this as an experiment. A support earns its place by making the task easier to enter, remember, or complete. If it does not help, change the system.
