

Chronic pain: pacing, function and access

Original support worksheet | Adults | Reviewed 2026-10-10

Use fictional or appropriately de-identified notes. Write, draw, dictate or point. Not a validated measure, diagnostic test or crisis service.

Valued activity: Why it matters; task demand

Available capacity: Pain, sleep, health, context

Activity + rest: Feasible pattern, not endurance test

Delayed effect: Recovery, flare, participation cost

Adapt with team: Access, care, next choice

Valued task and current/delayed cost

Feasible activity/rest pattern to discuss with team

Access or task-sharing support I choose

Delayed outcome, flare concerns and next adjustment

Next step: who will do what, by when, and how will we review helpfulness or harm?

New neurological changes, injury, systemic symptoms or other concerning pain changes need appropriate medical assessment. This page does not establish that a flare is benign or recommend medication changes.
