

Insomnia: assessment questions and CBT-I readiness

Original support worksheet | Adults | Reviewed 2026-10-10

Use fictional or appropriately de-identified notes. Write, draw, dictate or point. Not a validated measure, diagnostic test or crisis service.

Opportunity + timing: Real schedule and sleep window

Sleep difficulty: Course, pattern, prior help

Daytime effects: Safety, function, distress

Qualified evaluation: Differential and treatment suitability

CBT-I access/review: Trained care, adaptation, monitoring

Sleep opportunity/timing and difficulty description

Daytime effects and immediate safety concern

Health/mood/medication questions for assessment

Treatment access needs, owner and review plan

Next step: who will do what, by when, and how will we review helpfulness or harm?

Dangerous sleepiness, rapid mood activation, acute confusion or new medical concerns require timely assessment. Do not drive or perform hazardous tasks when unsafe. Sleep restriction and medication changes require qualified care.
