

Functional support map

Describe first. Hold more than one explanation. Agree one support and review the result.

Context around the event

Sleep, health/pain, access, setting, relationships, culture, recent changes.

BEFORE

What changed or was asked?

>

OBSERVED ACTION

What could a camera record?

>

AFTER

What followed? Who did what?

POSSIBLE EXPLANATIONS - not proven functions

Access / communication

Directions, sensory load, pain?

Skill / demand

Instruction, output, initiation?

Learning history

Patterns across repeated events?

ONE AGREED SUPPORT + REVIEW

What will change? Measure participation, learning, distress, support needed, and adverse effects. Who reviews, and when?

Ask the person what they notice and what would help. Do not provoke unsafe behavior to test function.

ABC observations generate hypotheses; qualified teams conduct formal functional assessment.
