

Supervised practice sheet

Fictional or appropriately de-identified rehearsal only. Education level does not authorize clinical duties.

ROLE + AUTHORIZED TASK

My role, training, supervisor, permitted activity, and when to consult.

ASK THE CLIENT

One clear question; allow pointing, writing, or another preferred response mode.

INSTRUCTION FOR THE WORKER

What to notice, confirm, or do. This is not a question to read to the client.

OBSERVATION -> ACTION -> RESPONSE

Separate observed events, attributed reports, and hypotheses. Record only actions that occurred.

HANDOFF + SUPERVISION QUESTION

Who receives the concern? What was confirmed? Who owns follow-up, by when? What remains uncertain?

Rehearsal checks: neutral description / communication access / real choices / scope / closed-loop follow-up.

Urgent danger or medical change: activate the local response pathway. Do not wait for routine supervision.

A checklist is a practice aid, not evidence of competence. Ask for direct observation and feedback.
