

Learning and access: two tracks, one plan

Teach the missing skill and support participation together. Use fictional data on shared devices; save clinical data in approved systems.

Meaningful goal / target skill

LEARN THE SKILL

Missing concept / strategy

Explicit teaching + practice

Evidence of learning

ACCESS THE TASK

Demand getting in the way

Format / response / environment support

Evidence of usable access

REVIEW BOTH TRACKS

Task / accuracy / support level / distress or effort / learner perspective

Next action + owner

Review date / reason to revise

Name the purpose: an accommodation changes access; a modification changes the expected target. A tool may serve different purposes on different tasks. A support trial does not establish diagnosis, eligibility, or placement.
